

human language technology  
center of excellence

*The Human Language Technology Center of Excellence at Johns Hopkins University was founded in 2007 to create next-generation algorithms for speech and language processing. We identify and create innovative technologies that could have significant impact on challenging real-world problems. Our research addresses key challenges in extracting information from massive sources of text and speech.*

We're always looking for talented personnel to join our team! We offer opportunities for summer hires for our SCALE summer workshop as well as full-time researcher hires. We welcome all inquiries.
